R88D-KN C-ECT, R88D-KN C-ML2, R88D-KT

Accurax G5 rotary drive

Accurate motion control in a compact size servo drive family. EtherCAT and safety built-in.

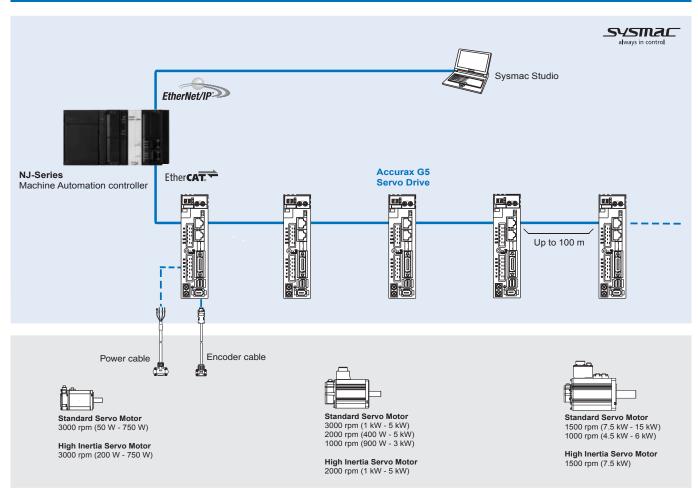

- EtherCAT, ML-II and Analog/pulse servo drive models
- · Safety conforming ISO13849-1 PL-d
- High-response frequency of 2 kHz
- High resolution provided by 20 bits encoder
- Drive Programming: embedded indexer functionality in the Analogue/pulse models
- · External encoder input for full closed loop
- · Real time auto-tuning
- Advanced tuning algorithms (Anti-vibration function, torque feedforward, disturbance observer)

Ratings

- 230 VAC single-phase 100 W to 1.5 kW (8.59 Nm)
- 400 VAC three-phase 600 W to 15 kW (95.5 Nm)

General specifications (for EtherCAT servo drives)

Pe	rformance	Frequency characteristics	2 kHz				
terface	Command input		EtherCAT commands (for sequence, motion, data setting/reference, monitor, adjustment, and other commands).				
EtherCAT interface	Drive Profile ^{*1}		CSP, CSV, CST, Homing and Position Profile modes (CiA402 Drive Profile) Homing mode Position profile mode Dual touch probe function (Latch function) Torque limit function				
signal	Sequence input sig		Multi-function input × 8 by parameter setting (forward/reverse drive prohibition, emergency stop, external latch, origin proximity, forward/reverse torque limit, general purpose monitor input).				
J/O siç	Sequence output si		$1 \times$ servo drive error output $2 \times$ multi-function outputs by parameters setting (servo ready, brake release, torque limit detection, zero speed detection, warning output, position completion, error clear attributed, programmable output)				
	USB	Interface	Personal computer/ Connector mini-USB				
	communications	Communications standard	Compliant with USB 2.0 standard				
		Function	Parameter setting, status monitoring and tuning				
	EtherCAT	Communications protocol	IEC 61158 Type 12, IEC 61800-7				
	communications	Physical layer	100BASE-TX (IEEE802.3)				
		Connectors	RJ45 × 2 ECAT IN: EtherCAT input × 1 ECAT OUT: EtherCAT output × 1				
		Communications media	Category 5 or higher (cable with double, aluminium tape and braided shielding is recommended)				
		Communications distance	Distance between nodes: 100 m max.				
tions	Autotuning Dynamic brake (DB Regenerative proce Overtravel (OT) pre	LED indicators	RUN × 1 ERR × 1 L/A IN (Link/Activity IN) × 1 L/A OUT (Link/activity OUT) × 1				
ŭ	Autotuning		Automatic motor parameter setting. One parameter rigidity setting. Inertia detection.				
d fi	Dynamic brake (DB	3)	Built-in. Operates during main power OFF, servo alarm, servo OFF or overtravel.				
ate	Regenerative proce	essing	Internal resistor included in models from 600 W to 5 kW. Regenerative resistor externally mounted (option).				
g	Overtravel (OT) pre	evention function	DB stop, deceleration stop or coast to stop during P-OT, N-OT operation				
nte	Encoder divider fun	ction	Gear ratio				
Γ	Protective functions	3	Overcurrent, overvoltage, undervoltage, overspeed, overload, encoder error, overheat				
	Analog monitor functions for supervision		Analog monitor of motor speed, speed reference, torque reference, command following error, analog input The monitoring signals to output and their scaling can be specified with parameters. Number of channels: 2 (Output voltage: ±10V DC)				
	Panel operator	Display functions	2 × digit 7-segment LED display shows the drive status, alarm codes, parameters				
		Switches	2 × rotary switches for setting the node address				
	CHARGE lamp		Lits when the main circuit power supply is turned ON.				
	Safety terminal	Functions	Safety Torque OFF function to cut off the motor current and stop the motor. Output signal for failure monitoring function.				
		Conformed standards	EN ISO13849-1:2008 (PL- d, Performance Level d), IEC61800-5 -2:2007 (function STO, Safe Torque OFF), EN61508:2001 (Safety Integrity Level 2, SIL2), EN954-1:1996 (CAT3).				
L	External encoder fe	edback	Serial signal and line-driver A-B-Z encoder for full-closed control				

 $^{^{\}star 1}$ The CSV, CST and Homing modes are supported in the servo drive with version 2.0 or higher.

General specifications (for MECHATROLINK-II servo drives)

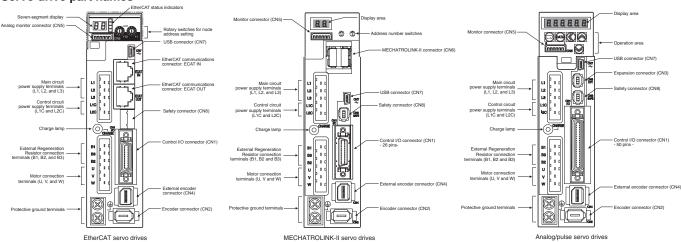

Sequence input signal Multi-function input × 8 by parameter setting (forward/reverse drive prohibition, emergency stop, external origin proximity, forward/reverse torque limit, general purpose monitor input). Sequence output signal It is possible to output three types of signal form incl: brake release, servo ready, servo alarm, positionin plete, motor rotation speed detection, torque domicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence detection, speed command status. Interface Personal computer/ Connector mini-USB Communications MECHATROLINK-I II communications Station address 41H to 51 FH (max. number of slaves: 30) Transmission speed 10 Mbps Transmission speed 11, 2 & 4 ms Data length 32 bytes Autotruning Data length 32 bytes Built-in. Operates during main power OFF, servo alarm, servo OFF or overtravel. Internal resistor included in models from 600 W to 5 kW. Regenerative resistor externally mounted (optio Overtravel (OT) prevention function DB stop, deceleration stop or coast to stop during P-OT, N-OT operation Overcurrent, overvoltage, undervoltage, overspeed, overload, encoder error, overheat Analog monitor functions for supervision Analog monitor functions for supervision Analog monitor functions for supervision Analog monitor of motor speed, speed reference, torque reference, command following error, analog inp The monitoring signals to output and their scaling can be specified with parameters. Number of chamnels: 2 (Output voltage: ±10V DC) Switches 2 × rotary switches for setting the MECHATROLINK-II node address CHARGE lamp Safety terminal Functions Encoformations and training terminal stop or coast to				Position control, velocity control, torque control, full-closed control.				
Soft start time setting O to 10 s (acceleration, deceleration can be set separately).	P	erformance	Frequency characteristics	2 kHz				
Sequence input signal MECHATROLINK-II commands (for sequence, motion, data setting/reference, monitor, adjustment and commands)			Speed zero clamp	Preset velocity command can be clamped to zero by the speed zero clamp input.				
Sequence input signal Multi-function input × 8 by parameter setting (forward/reverse drive prohibition, emergency stop, external origin proximity, forward/reverse torque limit, general purpose monitor input). Sequence output signal It is possible to output three types of signal form incl: brake release, servo ready, servo alarm, positionin plete, motor rotation speed detection, torque domicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence det warning, position command status, speed limit detection, acre so speed detection, speed conicidence detection, speed command status. External encoder feedback Serial signal and line-driver A-B-Z encoder for full-closed control		External encoder fe	edback	Serial signal and line-driver A-B-Z encoder for full-closed control				

General specifications (for Analog/pulse servo drives)

С	ontr	ol modes	External control	(1) position control, (2) velocity control, (3) torque control, (4) position/velocity control, (5) position/torque control,				
				(6) velocity/torque control and (7) full-closed control.				
			Internal positioning	Drive Programming: indexer functionality enabled by parameter.				
7	Per	formance	Frequency characteristics	2 kHz				
ŧ			Speed zero clamp	Preset velocity command can be clamped to zero by the speed zero clamp input.				
၀			Soft start time setting	0 to 10 s (acceleration, deceleration can be set separately). S-curve acceleration/deceleration is also available.				
ne	=	Speed control	Speed reference voltage	6 VDC at rated speed: set at delivery (the scale and polarity can be set by parameters)				
ord	gu	Torque limit		3 VDC at rated torque (torque can be limited separately in positive/negative direction).				
Speed/torque control	Input signal		Preset speed control	Preset speed is selectable from 8 internal settings by digital inputs.				
ē	bul	Torque control	Torque reference voltage	3 VDC at rated torque: set at delivery (the scale and polarity can be set by parameters).				
g	므		Speed limit	Speed limit can be set by parameter.				
ō		Command	Input pulse type	Sign + pulse train, 90° phase displacement 2-phase pulse (A-phase+ B-phase) or CCW/CW pulse train				
뒫	nal	pulse	Input pulse frequency	4 Mpps max. (200 Kpps max. at open collector).				
Position control	Input signal		Command pulse scaling (Electronic Gear)	Applicable scaling ratio: $1/1000$ to 1000 Any value of 1 to 2^{30} can be set for numerator (encoder resolution) and denominator (command pulse resolution per motor revolution). The combination has to be within the range shown above.				
_	=	Command	Input pulse type	Sign + pulse train, 90° phase displacement 2-phase pulse (A-phase+ B-phase) or CCW/CW pulse train				
¥	g	pulse	Input pulse frequency	4 Mpps max. (200 Kpps max. at open collector).				
Full-closed control	Input signal		Command pulse scaling (Electronic Gear)	Applicable scaling ratio: 1/1000 to 1000 Any value of 1 to 2 ³⁰ can be set for numerator (encoder resolution) and denominator (command pulse resolution). The combination has to be within the range shown above.				
Full-clo	Ext	External encoder scaling		Applicable scaling ratio: 1/20 to 160 Any value of 1 to 2 ³⁰ can be set for numerator (encoder resolution) and denominator (external encoder resolution per motor revolution). The combination has to be within the range shown above.				
	Fur	nctionality select	tion	Functionality enabled by parameter.				
g	Sup	ported function	ality	G5 Analogue/pulse servo drive with firmware 1.10 or higher.				
Ë	Sof	tware		CX-Drive version 2.30 or higher.				
Ē	Cor	mmunication		The program can be downloaded via USB communication (CX-Drive)				
Drive Programming	Cor	Command types		Move relative, Move absolute, Jog, Homing, Deceleration stop, Velocity update, Timer, Output signal control, Jump, Conditional branching,				
ΘЬ	Nur	mber of comma	nds	Up to 32 commands (0 to 31)				
۵	Cor	nmand execution	on	Strobe input to execute the selected command or to execute a complex sequence (combination of various commands).				
	Cor	mmand selectio	n	Up to 5 digital inputs to select the individual commands or sequences				

	Position signal out	put	A-phase, B.phase, Z-phase line driver output and Z-phase open-collector output.			
	Sequence input signal	External control	 Multi-function input × 10 by parameter setting: servo ON, control mode switching, forward/reverse drive prohibition, vibration filter switching, gain switching, electronic gear switching, error counter reset, pulse prohibition, alarm reset, internal speed selection, torque limit switching, zero speed, emergency stop, inertia ratio switching, velocity/torque command sign. Dedicated input × 1 (SEN: sensor ON, ABS data request). 			
I/O signal		Internal positioning (Drive programming mode)	 - Multi-function input × 10 by parameter setting: servo ON, forward/reverse drive prohibition, damping filter switching, gain switching, alarm reset, torque limit switching, emergency stop, immediate stop, deceleration stop input, inertia ratio switching, latch input, origin proximity input, strobe and 5 × input command selection. - Dedicated input × 1 (SEN: sensor ON, ABS data request). 			
0/1	Sequence output signal	External control	- 3 × outputs signals configured by parameter settings: brake release, servo ready, servo alarm, positioning complete, motor rotation speed detection, torque limit detection, zero speed detection, speed coincidence detection, warning, position command status, speed limit detection, speed command status. - 1 output fixed to Alarm output.			
		Internal positioning (Drive programming enabled)	3 × outputs signals configured by parameter settings: ready, Brake, position completed, motor speed detection torque limit status, zero speed detection, speed conformity, warning, position command status, position comple			
	USB	Interface	- 1 output fixed to Alarm output. Personal computer/ Connector mini-USB			
	Communications	Communications standard	Compliant with USB 2.0 standard			
		Function	Parameter setting, status monitoring and tuning			
	Autotuning		Automatic motor parameter setting. One parameter rigidity setting. Inertia detection.			
	Dynamic brake (DI	B)	Built-in. Operates during main power OFF, servo alarm, servo OFF or overtravel.			
	Regenerative proc	essing	Internal resistor included in models from 600 W to 5 kW. Regenerative resistor externally mounted (option).			
	Overtravel (OT) pr	evention function	DB stop, deceleration stop or coast to stop during P-OT, N-OT operation			
S	Encoder divider fur	nction	Optional division possible			
9	Electronic gearing	(Numerator/Denominator)	Up to 4 electronic gear numerators by combining with inputs.			
Sti	Internal speed sett	ing function	8 speeds may be set internally			
Į	Protective function	S	Overcurrent, overvoltage, undervoltage, overspeed, overload, encoder error, overheat			
ntegrated functions	Analog monitor fur	nctions for supervision	Analog monitor of motor speed, speed reference, torque reference, command following error, analog input The monitoring signals to output and their scaling can be specified by parameters. Number of channels: 2 (Output voltage: ±10V DC)			
'n	Panel operator	Display functions	6-digit 7-segment LED display shows the drive status, alarm codes, parameters			
		Panel operator keys	Used to set/monitor parameters and drive condition (5 key switches).			
	CHARGE lamp		Lits when the main circuit power supply is turned ON.			
	Safety terminal	Functions	Safety torque OFF function to cut off the motor current and stop the motor. Output signal for failure monitoring function.			
		Conformed standards	EN ISO13849-1:2008 (PL- d, Performance Level d), IEC61800-5 -2:2007 (function STO, Safe Torque OFF), EN61508:2001 (Safety Integrity Level 2, SIL2), EN954-1:1996 (CAT3).			
	External encoder feedback		Serial signal and line-driver A-B-Z encoder for full-closed control			
	Expansion connec	tor	Serial bus for option board			

Servo drive part names

Note: The above pictures show 230 V servo drives models only. The 400 V servo drives have 24 VDC power input terminals for control circuit instead of L1C and L2C terminals.

I/O specifications

Terminals specifications (for all servo drives)

Symbol	Name	Function
L1	Main power supply input terminal	AC power input terminals for the main circuit
L2	1	
L3		Note: for single-phase servo drives connect the power supply input to L1 and L3.
L1C		AC power input terminals for the control circuit
L2C	terminal	(for 200 V single/three-phase servo drives only).
24 V		DC power input terminals for the control circuit
0 V	1	(for 400 V three-phase servo drives only).
B1		Servo drives 200 V below 750 W: no internal resistor is connected. Leave B2 and B3 open.
B2	connection terminals	Connect an external regenerative resistor between B1 and B2.
В3		Servo drives from 600 W to 5 kW: short-circuit in B2 and B3 for internal regenerative resistor. If the internal regenerative resistor is insufficient, connect an external regenerative resistor between B1 and B2 and remove the wire between B2 and B3.
U	Servo motor connection	Terminals for outputs to the servomotor.
V	terminals	
W		

I/O signals (CN1) - Input signals (for EtherCAT and MECHATROLINK-II servo drives)

Pin No.	Signal name	Function					
6	I-COM	± pole of external DC power. The	± pole of external DC power. The power must use 12 V to 24 V (±5%)				
5	E-STOP	Emergency stop	The signal name shows the factory setting. The function can be changed by parame-				
7	P-OT	Forward run prohibited	ter setting.				
8	N-OT	Reverse run prohibited					
9	DEC	Origin proximity					
10	EXT3	External latch input 3					
11	EXT2	External latch input 2					
12	EXT1	External latch input 1					
13	SI-MON0	General purpose monitor input 0					
14	BTP-I	Connecting pin for the absolute er	ncoder backup battery. Do not connect when a battery is connected to the encoder				
15	BTN-I	cable (CN2 connector).					
17	_	Terminals not used. Do not conne	ct.

I/O signals (CN1) - Output signals (for Analog/pulse servo drives)

Pin No.	Control mode	Signal name	Function		
21	Position/	+A	Encoder phase A+	Encoder signals (or external scale signals during full closing control) are output	
22	Full closed loop	-A	Encoder phase A-	according Encoder Dividing Numerator parameter.	
48		+B	Encoder phase B+	This is the line-driver output (equivalent to R422). The maximum output frequency is 4 Mbps.	
49		–B	Encoder phase B-	Phase Z is output for encoder signals (or external scale signals during full closing	
23		+Z	Encoder phase Z+	control). This is the line-driver output (equivalent to R422).	
24		–Z	Encoder phase Z-	, , , ,	
19		Z	Encoder phase-Z output	Phase Z is output for encoder signals (or external scale signals during full closing	
25		ZCOM	Encoder phase-Z common	control). Open-collector output.	
11	Common	BKIR	Brake release signal output	Timing signal for operating the electromagnetic brake on a motor.	
10		BKIRCOM			
35		READY	Servo ready: ON if there is not ser	vo alarm when the control/main circuit power supply is turned ON.	
34		READYCOM			
37		/ALM	Servo alarm: turns OFF when an e	error is detected.	
36		ALMCOM			
39	Speed/torque	TGON	Motor rotation speed detection. This output turns ON when the motor rotation speed reaches the speed set in a parameter.		
39	Position/	INP1	Positioning complete output 1: turns ON when position error is equal to setting parameter.		
38	Full closed loop	INP1COM			
_	_	INP2	Position complete output 2	The function of output signals allocated to pins 11, 10, 34 to 39 can be changed with	
		P-CMD	Position command status	these options by parameters settings.	
		ZSP	Zero speed		
		WARN1	Warning 1

		B-CTRL3	Drive Programming output 3		
		B-BUSY	Output during Drive Programming		
		HOME-CMP	Origin search complete		

External encoder connector (CN4) - (for all servo drives)

Pin No.	Signal name	Function				
1	E5V	External scale power supply output. Use at 5.2 V ±5% and at or below 250 mA.				
2	E0V	This is connected to the control circuit ground connected to connector CN1.				
3	PS	External scale signal I/O (serial signal).				
4	/PS					
5	EXA	External scale signal input (Phase A, B, and Z signals). Performs the input and output of phase A, B and Z signals.				
6	/EXA					
7	EXB					
8	/EXB					
9	EXZ					
10	/EXZ					
Shell	FG	Shield ground				

Monitor connector (CN5) - (for all servo drives)

Pin No.	Signal name	Function	
1		Analog monitor output 1. Outputs the analog signal for the monitor. Use the parameters setting to select the output to monitor. Default setting: Motor rotation speed 1 V/(1000 r/min).	
2		Analog monitor output 2. Outputs the analog signal for the monitor. Use the parameters setting to select the output to monitor. Default setting: Motor rotation speed 1 V/(1000 r/min).	
3	GND	Ground for analog monitors 1, 2.	
4	-	Terminals not used. Do not connect.	
5	_		
6	_		

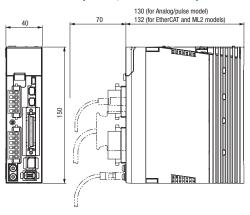

Safety connector (CN8) - (for all servo drives)

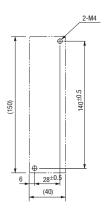

Pin No.	Signal name	Function
1	_	Not used. Do not connect
2	_	
3	SF1-	Safety input 1 & 2. This input turns OFF the power transistor drive signals in the servo drive to cut off the current output
4	SF1+	to the motor.
5	SF2-

Installation

Single-phase, 230 VAC (for EtherCAT and MECHATROLINK-II servo drives)

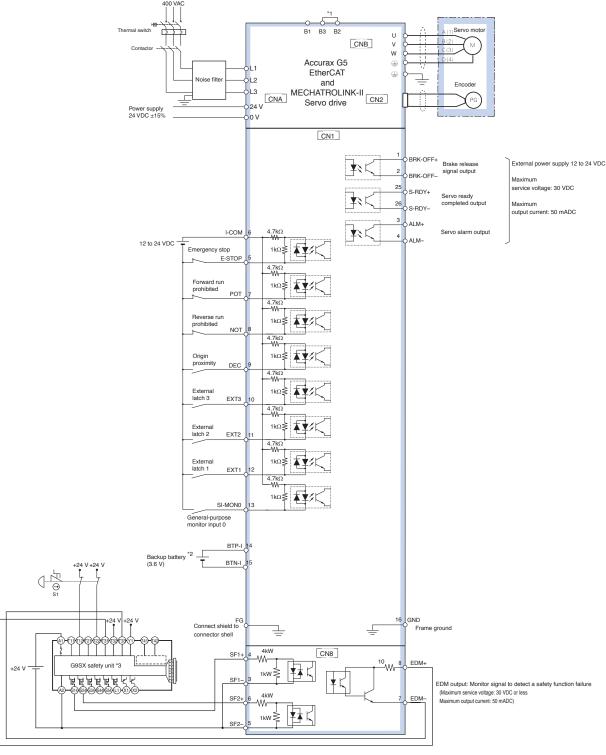

^{*1} For servo drives from 750 W, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

Note: The input function of pins 5 and 7 to 13, and output function of pins 1, 2, 25 and 26, can be changed via parameter settings.

^{*2} For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

^{*3} Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Three-phase, 400 VAC (for EtherCAT and MECHATROLINK-II servo drives)

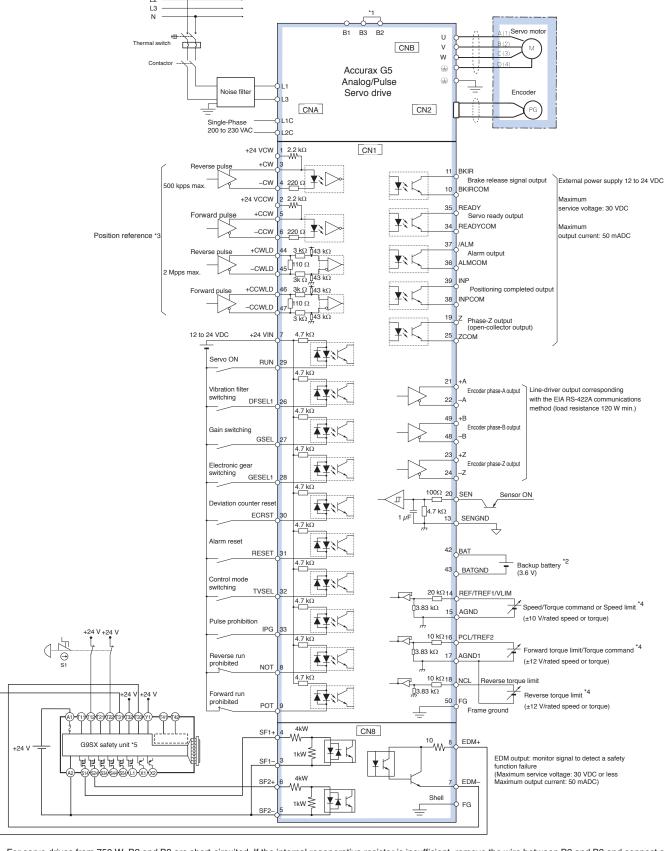

^{*1} Normally B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

Note: The input function of pins 5 and 7 to 13, and output function of pins 1, 2, 25 and 26, can be changed via parameter settings.

^{*2} For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

^{*3} Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Single-phase, 230 VAC (for Analog/pulse servo drives)

For servo drives from 750 W, B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

Note: The input function of pins 8,9 and 26 to 33, and output function of pins 10, 11, 34, 35, 38 and 39, can be changed via parameter settings.

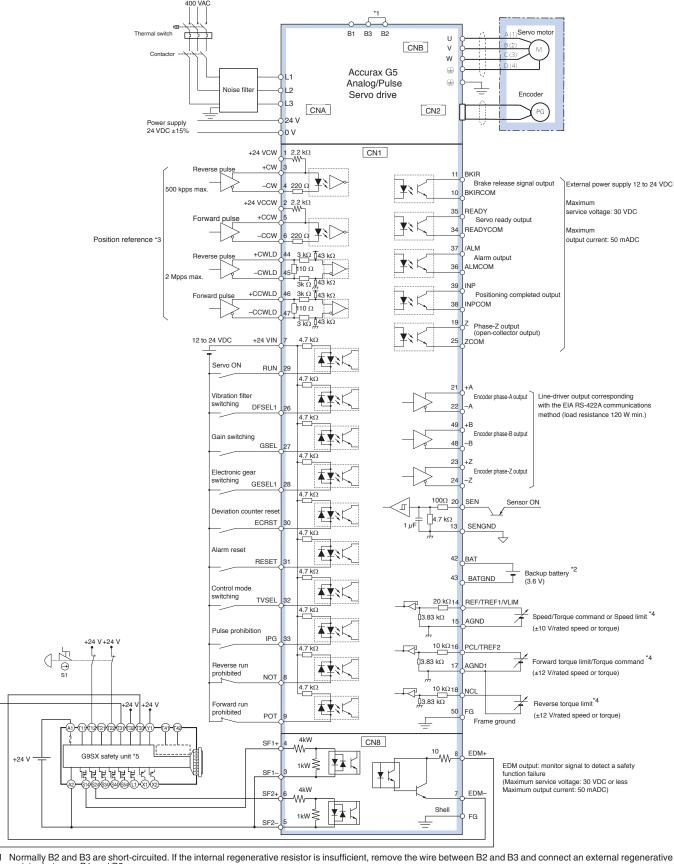

For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required. Only available in Position control mode.

^{*3}

The input function depends on control mode used (Position, speed or torque control).

^{*5} Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

Three-phase, 400 VAC (for Analog/pulse servo drives)

Normally B2 and B3 are short-circuited. If the internal regenerative resistor is insufficient, remove the wire between B2 and B3 and connect an external regenerative resistor between B1 and B2.

Note: The input function of pins 8,9 and 26 to 33, and output function of pins 10, 11, 34, 35, 38 and 39, can be changed via parameter settings.

For use only with an absolute encoder. If a backup battery is connected to CN1 I/O connector, an encoder cable with a battery is not required.

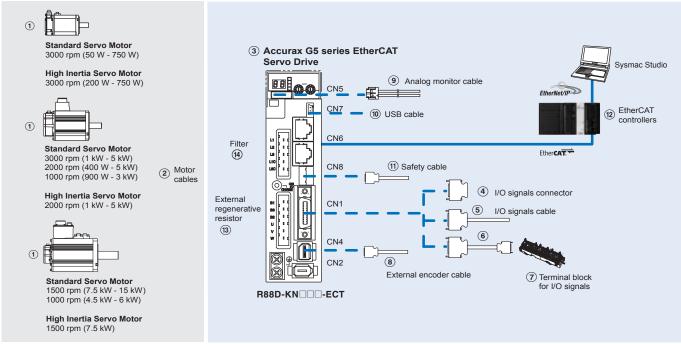

Only available in Position control mode.

The input function depends on control mode used (Position, speed or torque control).

Wiring diagram example using the G9SX safety unit. If a safety unit is not used, keep the factory safety bypass connector installed in the CN8.

	R88D-KT20F	R88A-FIK306-RE		6 A	0.3 mA / 32 mA*1	
	R88D-KT30F, R88D-KT50F	R88A-FIK312-RE		12.1 A	0.3 mA / 32 mA*1	
	R88D-KT75F	R88A-FIK330-RE		22 A	0.3 mA / 40 mA*1	
	R88D-KT150F	R88A-FIK350-RE		44 A	2 mA / 130 mA*1	

^{*1} Momentary peak leakage current for the filter at switch-on/off.

Connectors

Specifications	Model
I/O connector kit -50 pins-(for CN1)	R88A-CNU11C
External encoder connector (for CN4)	R88A-CNK41L
Safety I/O signal connector (for CN8)	R88A-CNK81S

Computer software

Specifications	Model
CX-Drive version 2.10 or higher	CX-DRIVE 2.10
CX-One software packaging including CX-Drive 2.10 or higher	CX-ONE

ALL DIMENSIONS SHOWN ARE IN MILLIMETERS.

To convert millimeters into inches, multiply by 0.03937. To convert grams into ounces, multiply by 0.03527.

Cat. No. I101E-EN-04A

In the interest of product improvement, specifications are subject to change without notice.
